

# Trackstick<sup>Pro</sup>

Federal Asset Management

Designed for use with  
**Google Earth<sup>TM</sup>**

- + SEARCH & RESCUE DATA MANAGEMENT
- + VEHICLE LOCATION & ROUTE HISTORY
- + LAW ENFORCEMENT & PUBLIC SAFETY
- + EMERGENCY SERVICES MONITORING
- + STATE & LOCAL GOVERNMENT
- + AREA SURVEYING & MAPPING
- + DEFENSE & INTELLIGENCE
- + HOMELAND SECURITY

The Trackstick Pro is an advanced GPS data logger capable of continuously recording its own location histories for extended periods of time. This device is powered by an included cigarette lighter plug, or can be hard wired to any vehicle. The Trackstick Pro is a low cost solution to help manage government agency vehicles and assets. The Trackstick Pro can also serve as a vital tool when preparing for or even during a disaster.

When combined with the unrivaled mapping power of Google Earth, the Trackstick Pro is an effective solution for tracking moving assets including emergency, police, parking enforcement, street cleaning, public transportation, utility and other city or federal vehicles.

The Trackstick Pro can log weeks or even months of travel histories. User selectable features allow the record time to be changed from a recording interval of every 5 seconds or from 1 minute up to every 60 minutes. A "first in, first out" memory map will continuously record while erasing the oldest location histories first.

The Trackstick Pro records Date, Time, Location, Speed, Direction, Altitude, Signal Strength and Temperature. All information can be instantly transferred via the included USB cable and viewed directly in Google Earth or Google Maps. Included data management and reporting software allows for easy evaluation of route histories.

The Trackstick Pro can improve productivity, manage assets and be instrumental in a variety of disaster relief efforts including evacuation route planning, search and rescue, property surveying and emergency vehicle management.

- + 2 1/2" X 2" X 3/4"
- + Weatherproof case
- + Detachable cradle
- + Firmware alarm notifies of any power interruptions
- + 4Mb flash memory records months of location histories
- + Runs on 5 – 24 volts DC with less than 6mA during normal operation
- + Built-in temperature recorder: -10°C / +14°F to +60°C/140°F +/- 1°C
- + Requires Windows XP
